Retrofits

John Straube, Ph.D., P.Eng
Building Science Corporation & University of Waterloo

www.buildingscience.com

Choices

- **Changing mechanical systems is least invasive**
 - often near end of life (20 yrs)
 - 10% eff improvement = 10% operating savings = easy
- **Lighting and ventilation**
 - Many buildings have too many inefficient lights that are on for too long
 - Most buildings have too much ventilation with too little control
 - Can be major savings (30-50%)
- **MUST have clear idea of enclosure upgrades before deciding on mechanical!**

2

Mechanical Retrofit

- **After enclosure upgrade**
 - Smaller quieter often different systems can be chosen
- **Air-based can be replaced with hydronic**
- **Steam-based can be replaced hotwater**
- **Low-temperature (more efficient) systems can be used**
- **For high ventilation load add HRV**
 - Schools, meeting rooms, etc
- **Variable speed fans and CO₂ controls**
- **Convert CAV to VAV**

3

Enclosure Retrofit

- **Important target for many buildings**
 - Airtightness
 - Windows
 - Insulation
 - Roof
 - Walls
 - Basement
 - Slabs
- **Prioritize by Ease and Impact**

4

bsc **Rational Retrofit Strategy**

- Eg a 125 ft x 50 ft 3 storey mill building
- 12 ft flr to flr, 9 ft basement 40% window

Component	Area (ft2)	U= 1 / R	Loss Btu/hr/F
Roof	6250	0.05 = 1/R20	312.5
Wall	7560	0.25 = 1/R4	1890
Windows	5040	1.0 = 1/1	5040
Air Leakage	0.3 ACH@ service		1400
Basement	3150	DbI R (2*R3)	525
Slab	6250	Triple (3*1.5)	1388

©2009 Building Science Corporation 5

bsc **Choices**

Always do exterior if you can follow perfect wall approach

But, if we have to, do interior beware floors, partitions, etc

©2009 Building Science Corporation 6

bsc **Exterior Insulation Retrofit**

- Any reasonable level of insulation can be provided
 - Final R of 20, 30, 40, 50
- Almost all penetrations of air, heat, and rain can be improved
- Significant reductions in moisture risk

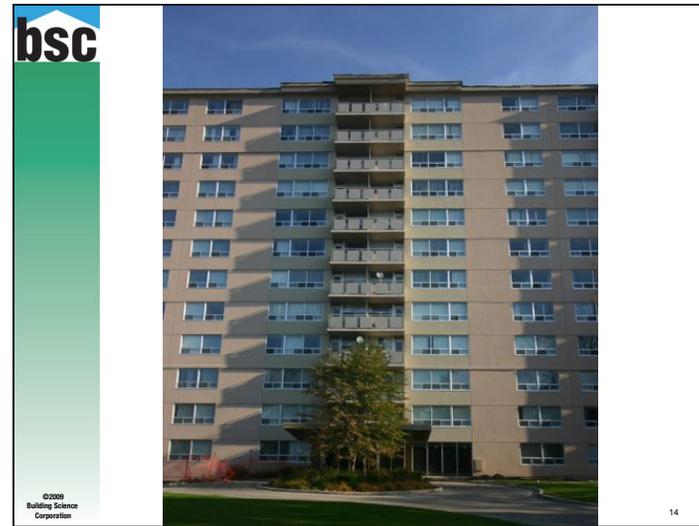

©2009 Building Science Corporation 7

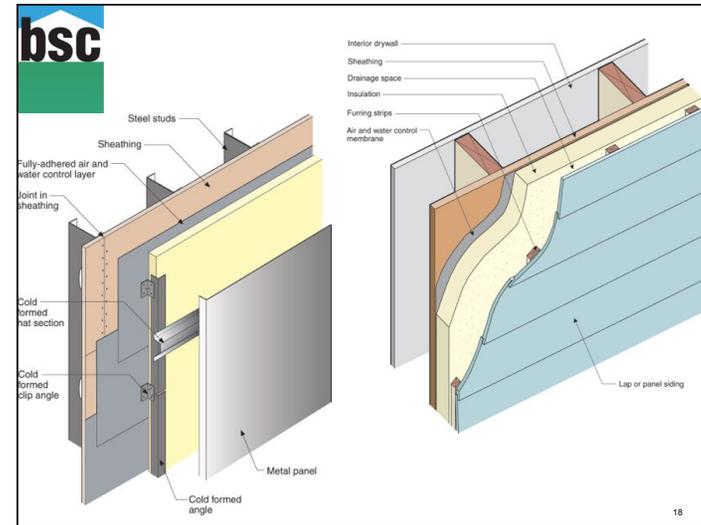

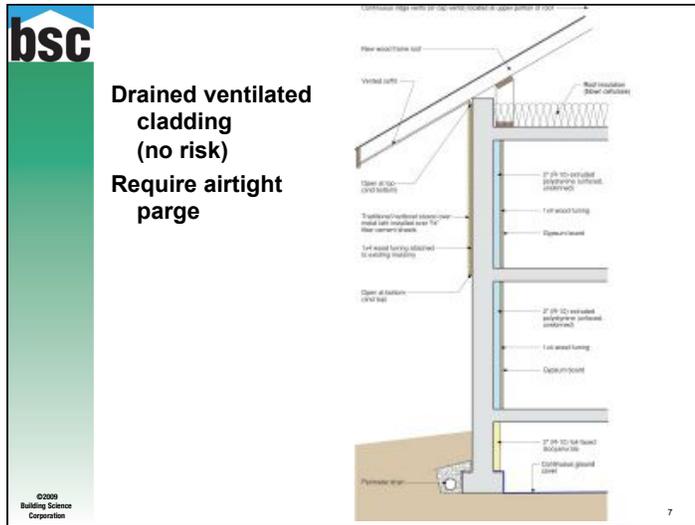

bsc **Overclad Options**

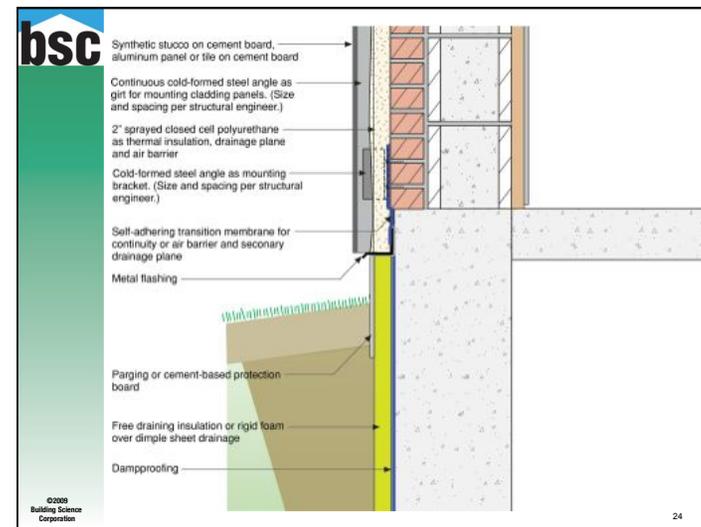

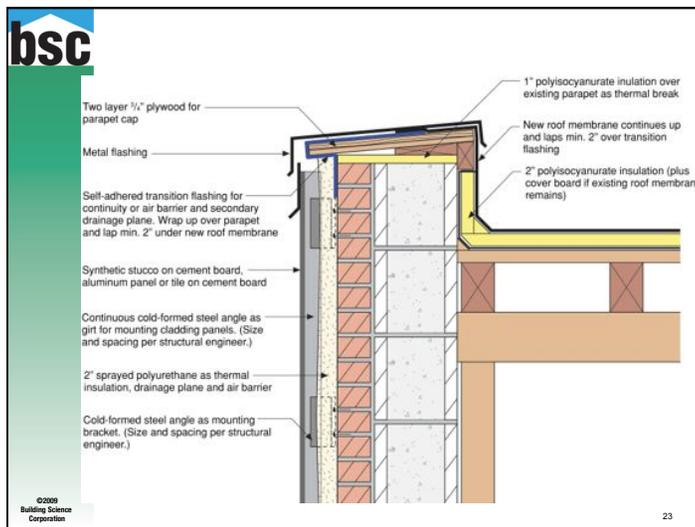

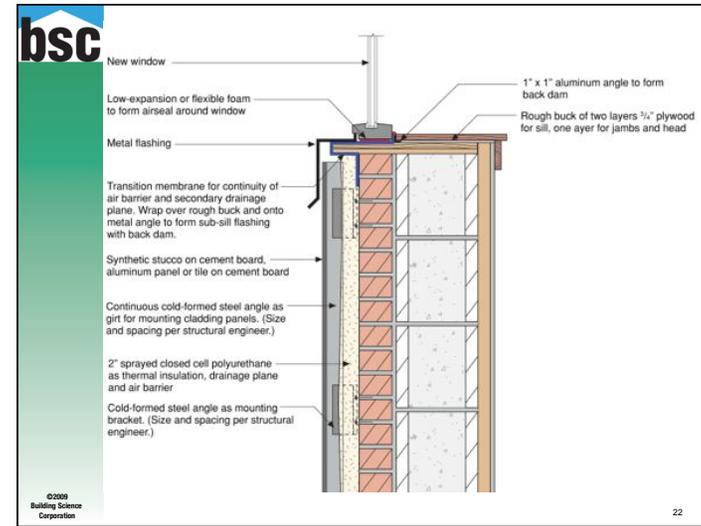

- Drained EIFS
- Drained & Ventilated metal sheets, panels, fiber cement
- Horizontal Lap Siding

bsc

Interior Retrofits

Interior retrofits can be relatively low risk for frost durable exterior enclosures

E.G.

- Brick block cavity walls
- Tiltup concrete, solid concrete, precast concrete

Use Air-impermeable insulation to prevent air loops that can cause condensation

bsc

- interior

A photograph of an interior room during a retrofit. The walls are covered in pink insulation. Scaffolding is set up in the room, and a window is visible. A blue tarp is on the floor.

bsc Solid Masonry: Interior Retrofit

©2009 Building Science Corporation 29

bsc Solid masonry

©2009 Building Science Corporation 30

bsc Load Bearing Solid Masonry

- Large stock of desirable buildings
- Downtown
- Attractive
- Good bones
- Flexible Program

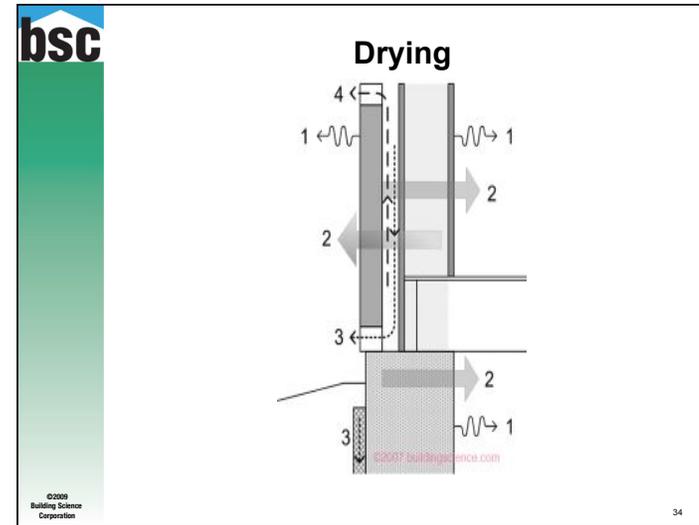

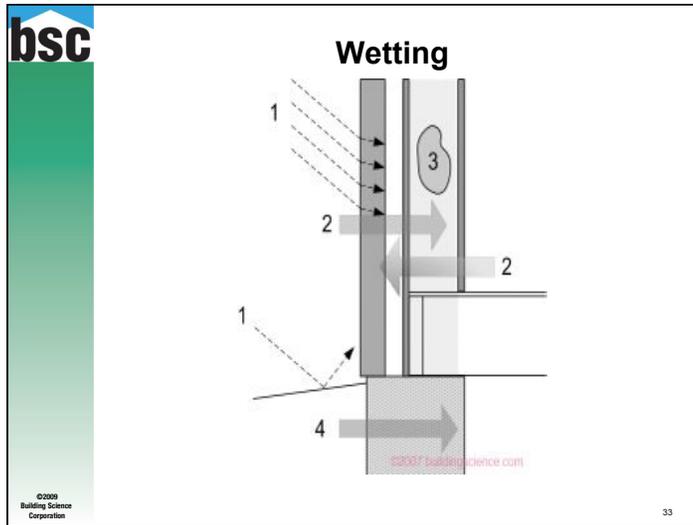

- Most want to keep brick exterior

bsc Moisture Balance

©2007 buildingscience.com 32

bsc

Durability

Insulating makes in/out face of enclosure cold
Gypsum board / OSB in summer/winter normal walls

Condensation occurs on cold surfaces

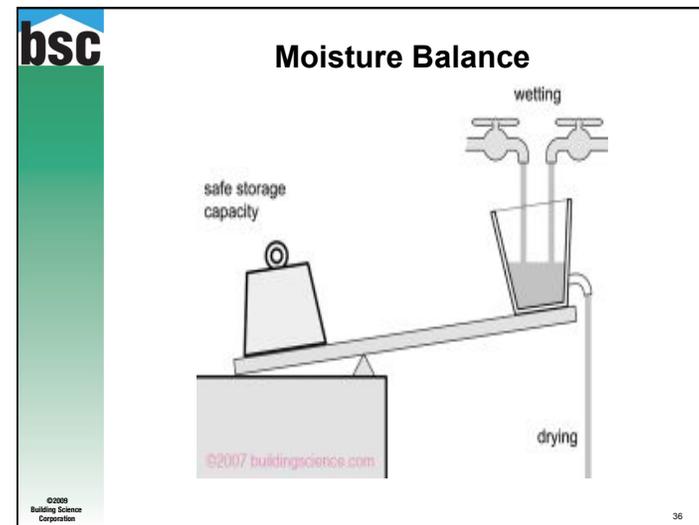

Drying occurs slowly from cold materials

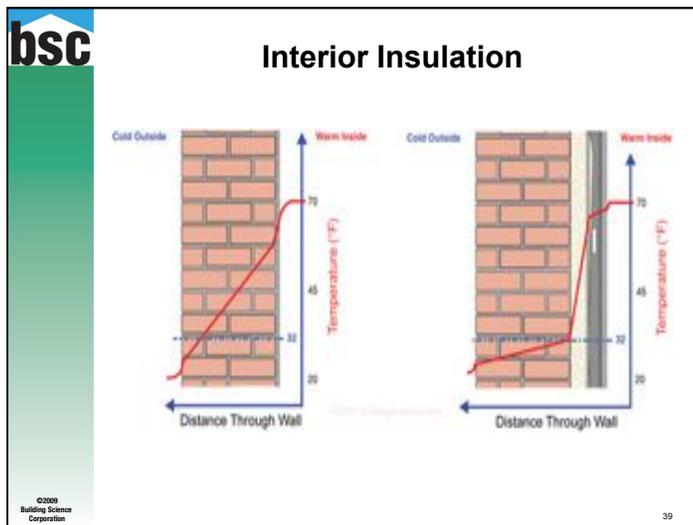

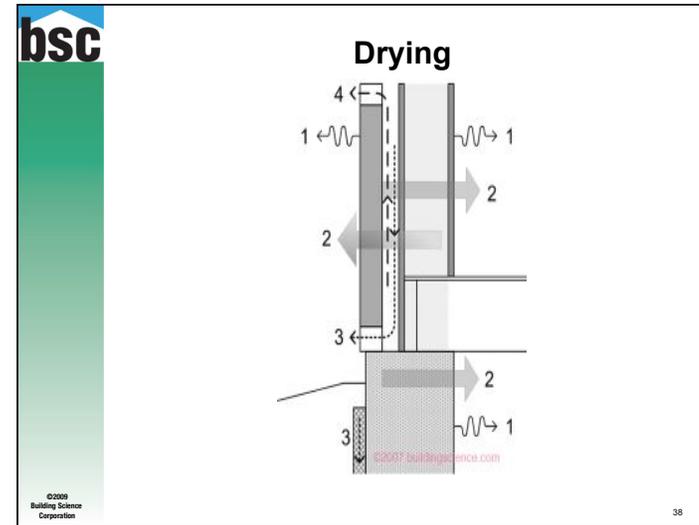

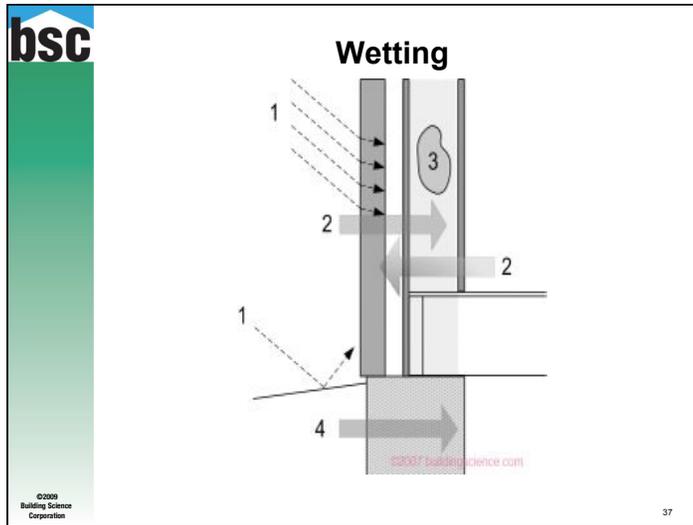

Ergo... Insulating makes things wetter and stay wetter longer!

Air & water vapor moves through fiberglass rockwool and cellulose

Foam stops air and slows vapor

©2009 Building Science Corporation

-
- Risks**
- Freeze-thaw
 - Salt and Osmosis
 - Rot of embedded wood
 - Damage to interior finish
- ©2009 Building Science Corporation 40

bsc

Freeze-thaw

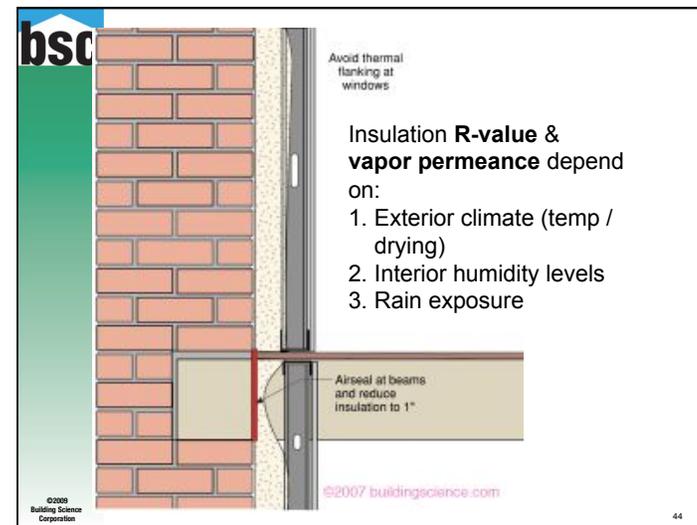

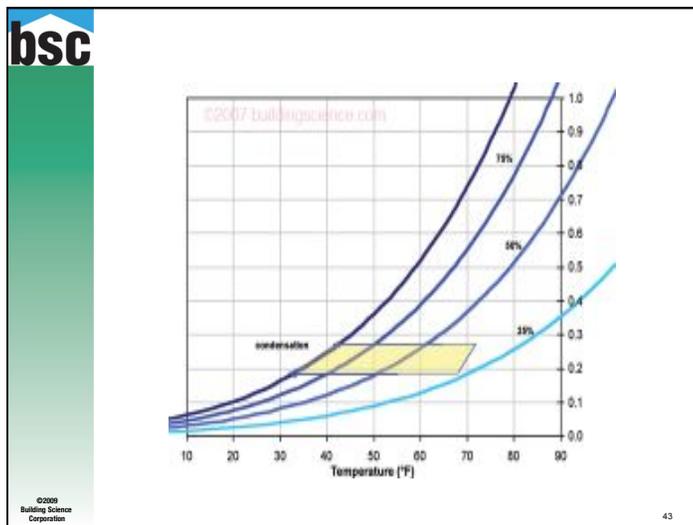

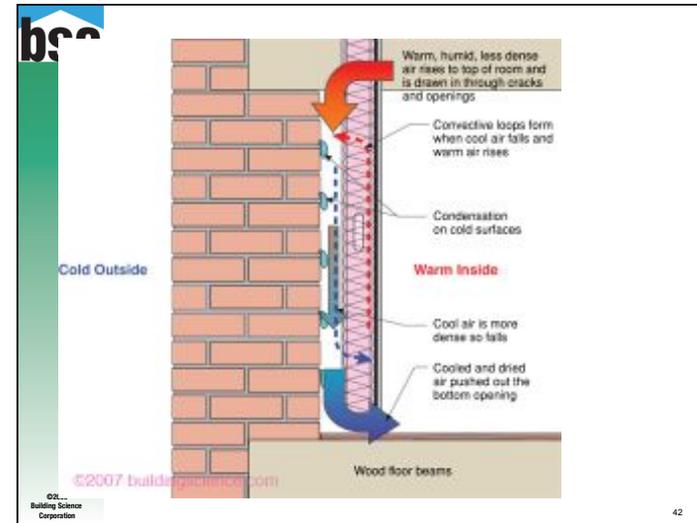

For a damaging F-T cycle one needs
 A temperature drop below about -5 C / 20 F
 Nearly saturated moisture content
 Porous, brittle material

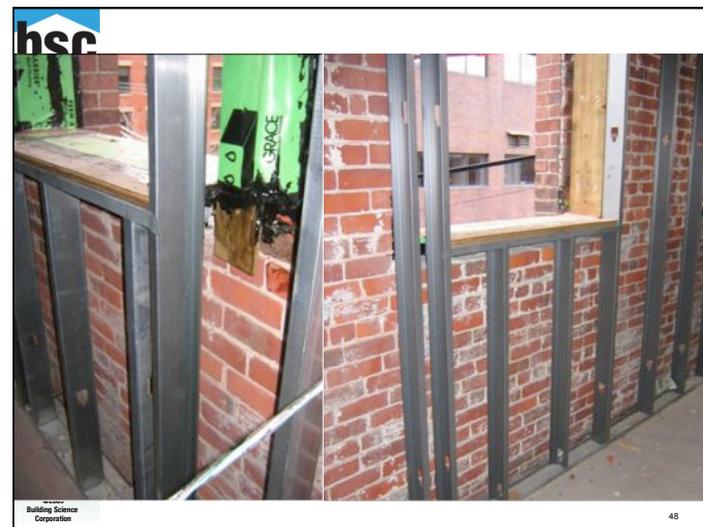

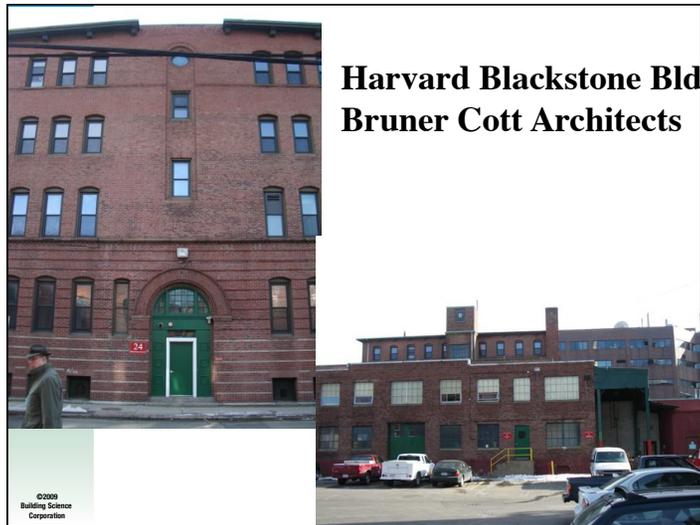

For brick, degree of saturation of 0.80 to 0.95

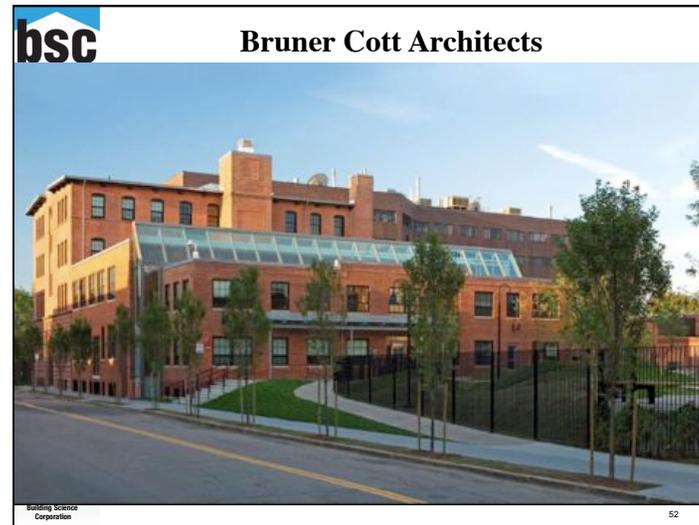

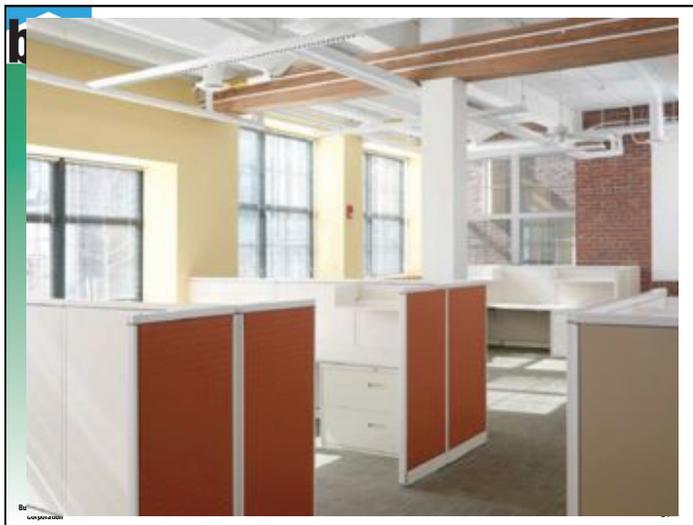

Insulating reduces masonry temperature

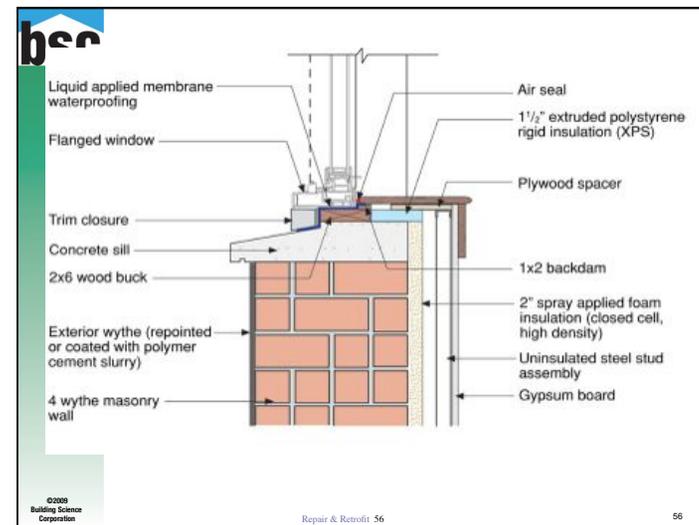

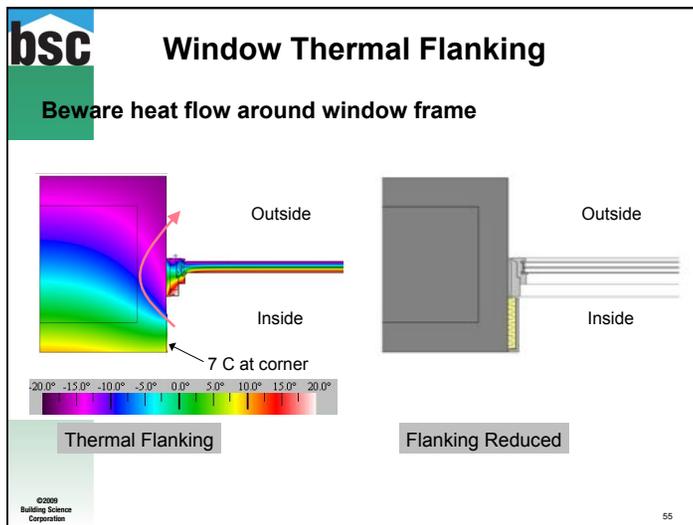

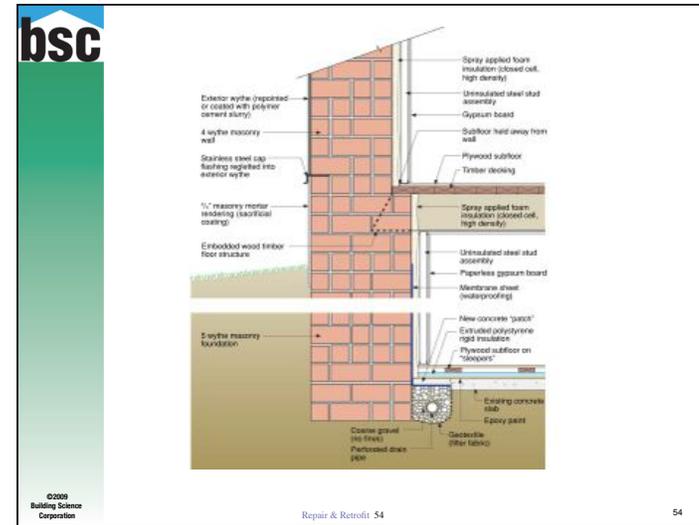

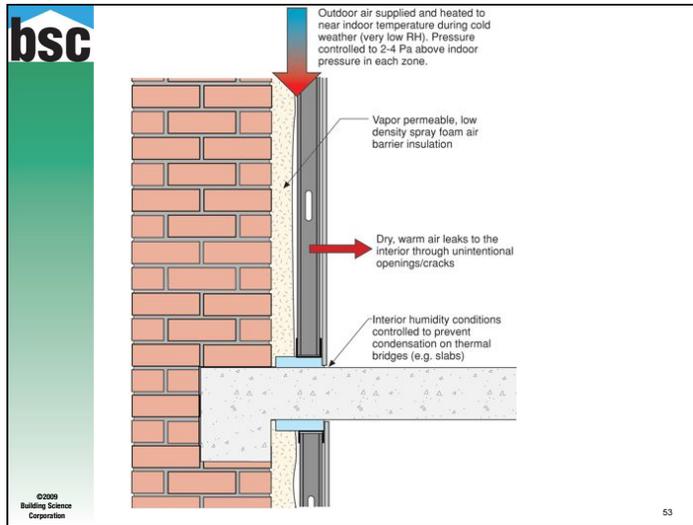

Therefore keep MC below 80% of saturation during cold weather

bsc

Conclusions

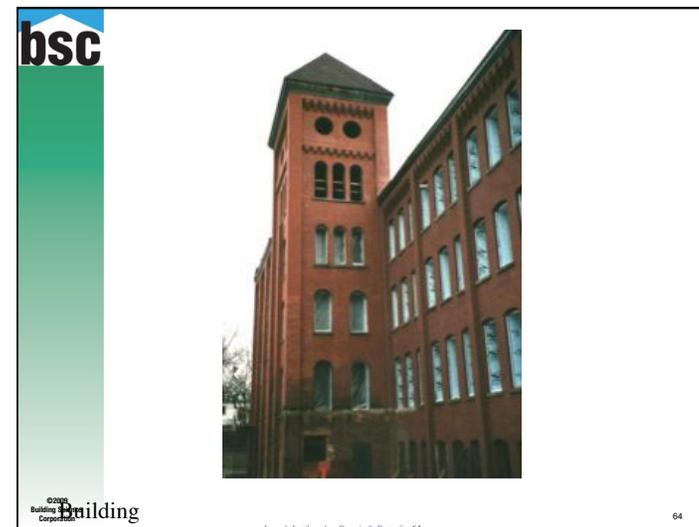

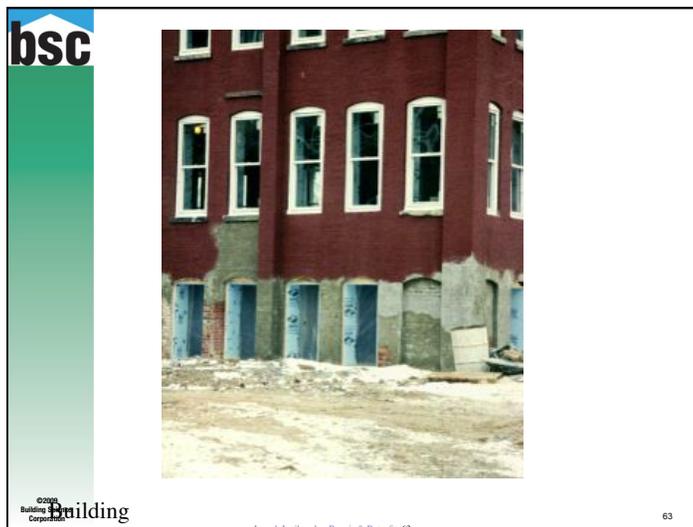

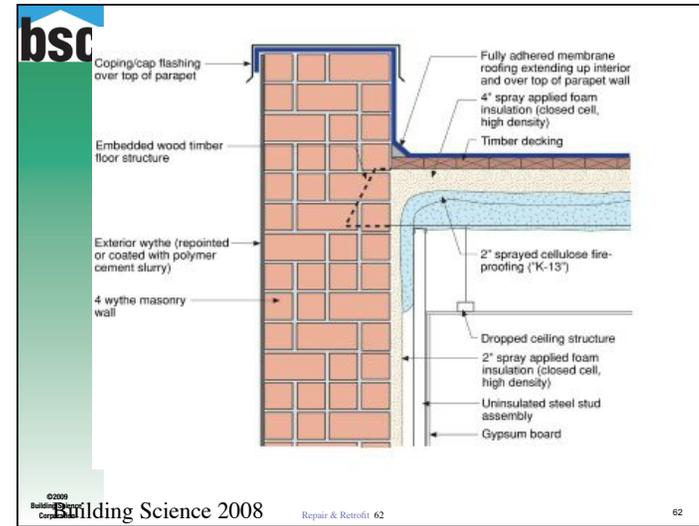

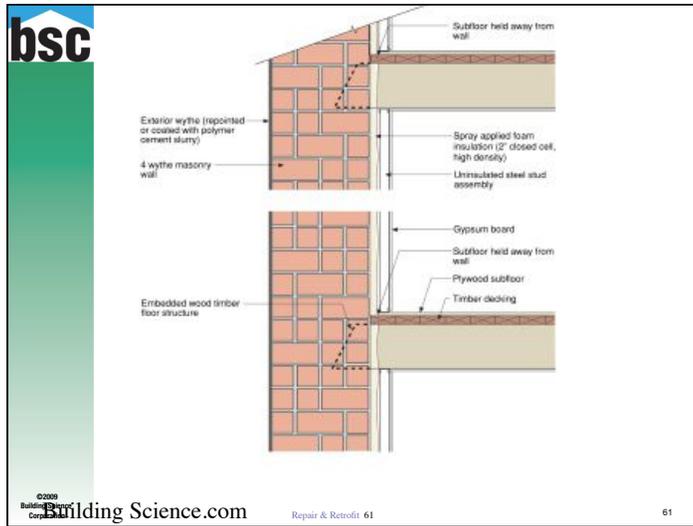

Exterior insulation retrofits
easy, affordable, low-risk, high performance

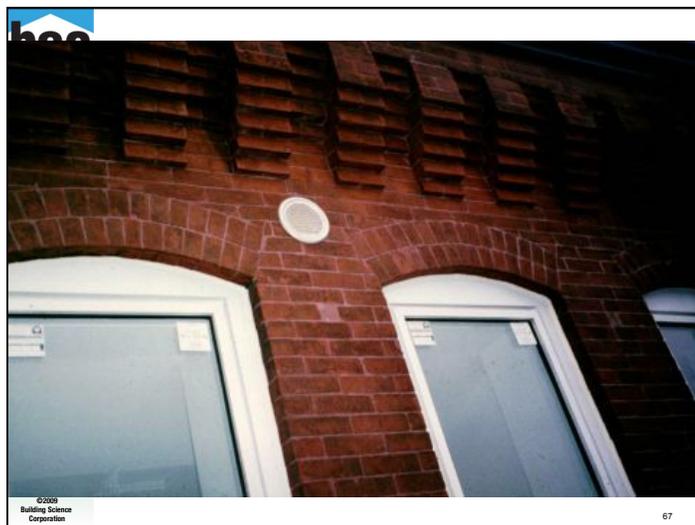

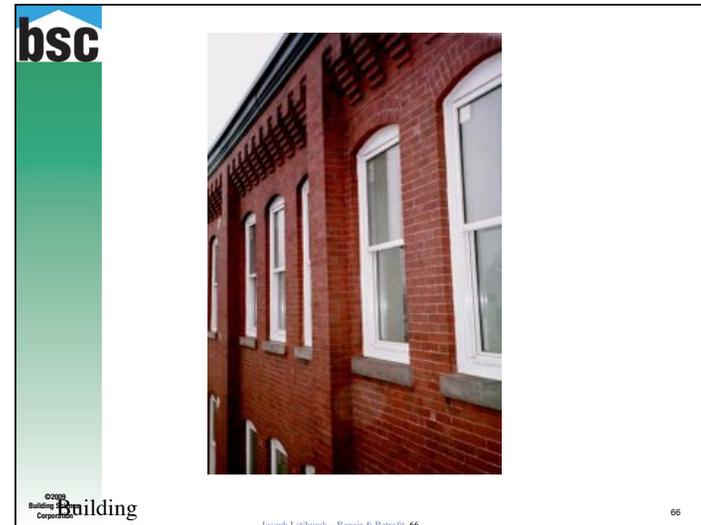

Interior Insulation Retrofits of Load-bearing Masonry are possible
Accept that masonry gets much colder
Great care required to
enhance drying as much as possible,
reduce wetting more than drying is reduced

bsc

Basements

- Easy to retrofit and improve from the interior
- Ceiling height is the big restriction for slab solutions
