

Deep Energy Retrofit Performance and Guidance Lessons from a Cold-Climate DER Pilot Program

Ken Neuhauser, Building Science Corporation

What is Deep Energy Retrofit?

- Retrofit to *high performance*
 - Durability
 - Comfort
 - Indoor air quality
 - Aesthetics
 - Amenity
 - Energy
- Existing building → Zero Net Energy Ready

How does “all of this” support zero net-energy ready homes?

How does zero net-energy ready homes support “all of this”?

“All of this” = significant energy use reductions in the residential sector

Deep Energy Retrofit is a path to ZNE

- What are the barriers?
 - Benefits are not understood
 - Methods are not understood
 - Costs are not understood

Barriers to Deep Energy Retrofit

- Benefits are not understood
 - Why do we do this?
 - Energy is what we focus on
 - energy use
 - airtightness
 - Other benefits ~~may be~~ are more valuable

Barriers to Deep Energy Retrofit

Methods are not understood

- Different from high performance new construction?
 - Constraints
 - Framing
 - Foundation already back-filled
 - Furniture and people inside
 - Stakes are higher
 - Value proposition more certain: unified incentives
- General methods and lessons

**MASS SAVE
DEEP ENERGY
RETROFIT BUILDER
GUIDE**

<http://www.buildingscience.com/documents/guides-and-manuals>

Barriers to Deep Energy Retrofit

- Costs are not understood
 - Costs less to build new?
 - Cost for what?
- DER project and measure costs

DER Performance and Guidance

Where do we get our information?

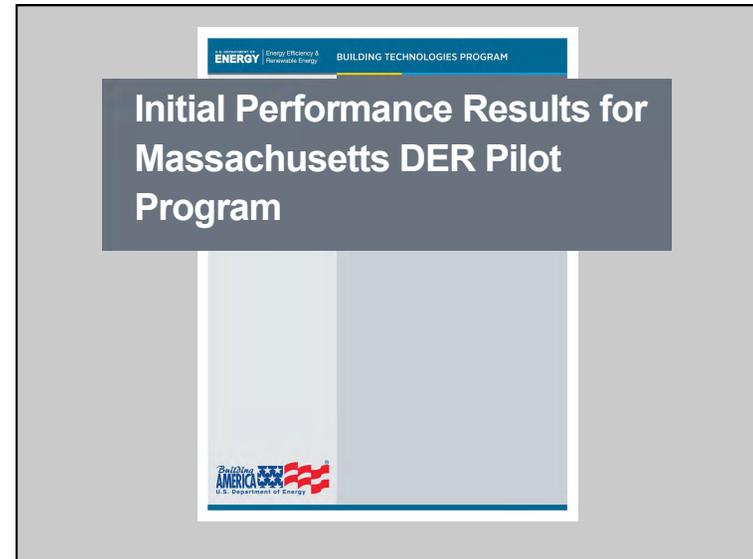

National Grid Deep Energy Retrofit Pilot

- Started in 2009, closed end of 2012
- Ambitions enclosure performance targets
- Ventilation measures, HVAC incentives
- Significant incentives!
 - Single family base: \$35-\$42K, 3 family \$72K
- Application, field verification, testing, utility bills
- 42 projects completed, 62 housing units
- Analysis completed for first 13 projects

EEBA – Excellence in Building
25 September 2013

Energy Efficiency &
Renewable Energy

DER Performance and Guidance

Enclosure performance targets:

- R 5, 10, 20, 40, 60
- 0.1 cfm50 / s.f. enclosure

EEBA – Excellence in Building
25 September 2013

Energy Efficiency &
Renewable Energy

DER Performance and Guidance

Enclosure performance targets:

- R 5 window,
- R10 slab,
- R20 foundation wall,
- R40 frame wall,
- R60 attic/roof
- 0.1 cfm50 / s.f. enclosure

EEBA – Excellence in Building
25 September 2013

Energy Efficiency &
Renewable Energy

DER Performance and Guidance

Performance parameters:

- Water control
- Airflow control
- Vapor control
- Thermal control

DER Performance and Guidance

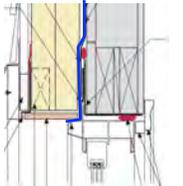

R-5 Windows

- Triple-glazed, low-e
- Flashing a big deal
- Approaches:
 - Innie
 - Outie
 - Metal strap ties
 - Picture frame

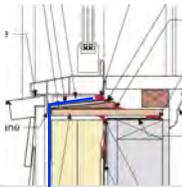

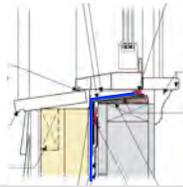

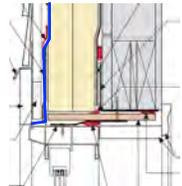

DER Performance and Guidance

Innie

Outie

DER Performance and Guidance

Window over strapping:

a hard habit to break, leads to water and air control problems

DER Performance and Guidance

- Window over strapping

DER Performance and Guidance

- Basement slab treatment

EEBA – Excellence in Building
25 September 2013

Energy Efficiency &
Renewable Energy
21

DER Performance and Guidance

Basement slab treatment

- ~\$6/sf average whole measure cost for insulation over the slab
- Insulation under the slab costs less but the whole measure unit cost is higher
- Unit cost for over the slab \approx basement ceiling unit cost

EEBA – Excellence in Building
25 September 2013

Energy Efficiency &
Renewable Energy
22

DER Performance and Guidance

R-20 Foundation Walls

- Approaches:

- ccSPF + paint ~ \$8/sf
- ccSPF w/ stud wall ~ \$8.90/sf
- Rigid board w/ or w/o stud wall ~ \$4.50/sf
- Exterior? (one)

EEBA – Excellence in Building

Building Science Corporation

DER Performance and Guidance

R-40 Frame Walls

- 2 layers polyisocyanurate, outer layer foil-faced
- Others:
 - 1 ccSPF interior
 - 1 ccSPF cavity plus rigid ext
 - 1 ccSPF cavity plus rigid ext
 - 1 exterior ccSPF plus rigid
 - 1 mineral fiber exterior

EEBA – Excellence in Building
25 September 2013

Energy Efficiency & Renewable Energy
28

Building Science Corporation

DER Performance and Guidance

R-40 Frame Walls

- Costs for exterior insulation vary widely
 - From < \$5/sf to > \$19/sf incremental cost
 - Repeat contractors > \$15/sf
 - Mean \$11.50/sf
- ccSPF interior
 - \$6.60/sf (1 instance)

DER Performance and Guidance

R-40 Frame Walls: why approach from outside?

- Water management
- Water management
- Air control
- People and stuff

Why approach from exterior?

Why approach from exterior?

Why approach from exterior?

Why approach from exterior?

- Drainage remediation

Siding removed to remediate flashing

Head flashing at new window

Drainage plane remediation at base of wall

Why approach from exterior?

Why approach from exterior?

Why approach from exterior?

DER Performance and Guidance

R-60 Roof

- Unvented
 - Rigid over deck and fibrous in cavities
cost increment: ~\$10 – \$18/sf, avg \$13.40/sf
 - Thick ccSPF underside of deck
cost increment: \$9.40 - \$14.40/sf, avg \$11.05/sf
- Vented
 - Vented attic \$14/sf energy-related
 - Mixed vented/unvented \$10.25/sf

DER Performance and Guidance

DER Performance and Guidance

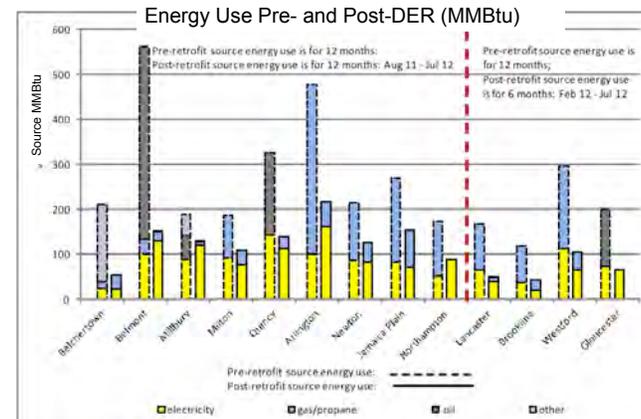

National Grid DER Pilot Performance

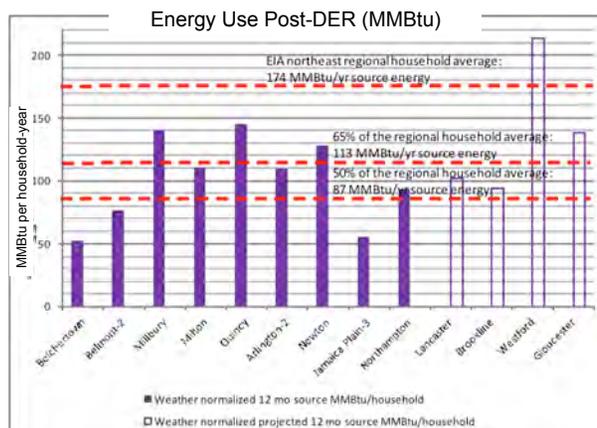

What energy performance do these DER homes achieve?

- Utility bill data collected
- Reduction?
- Achievement? (with respect to benchmark)
- What do outliers tell us?

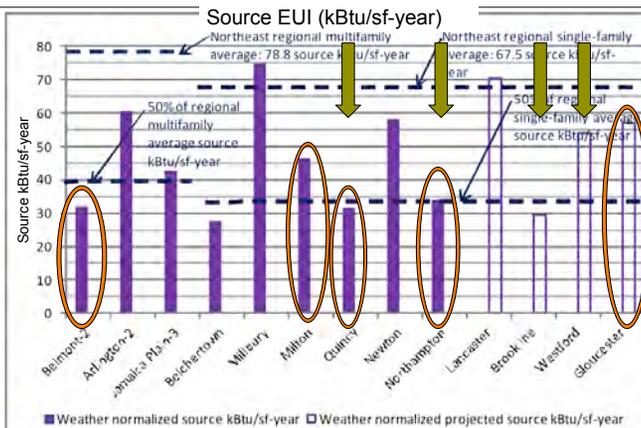

National Grid DER Pilot Performance

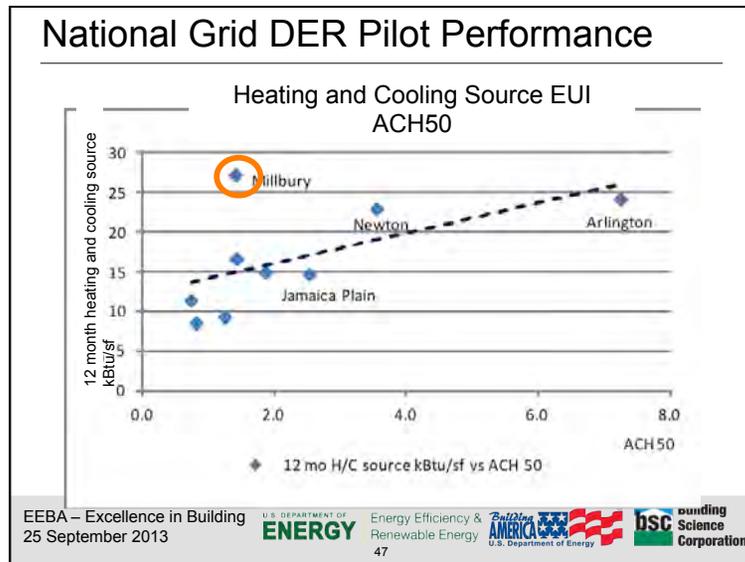

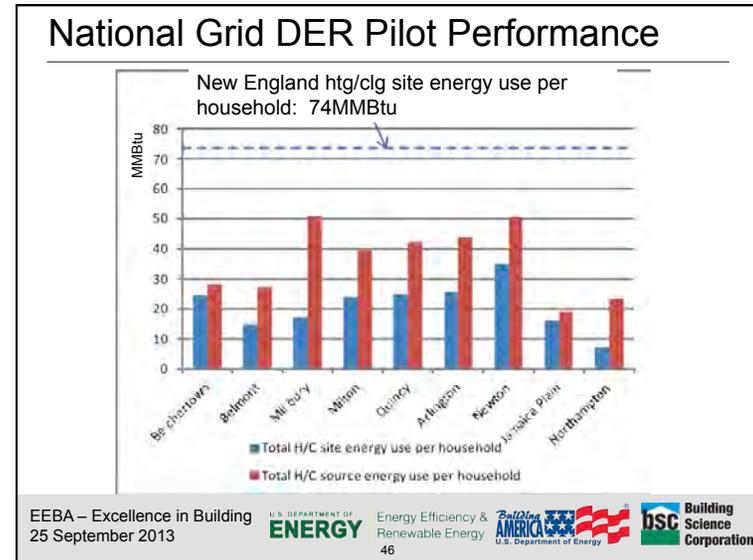

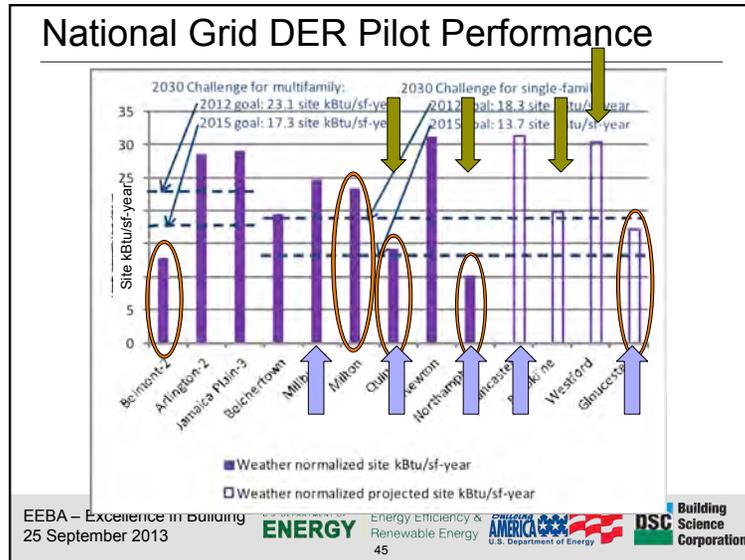

National Grid DER Pilot Performance

National Grid DER Pilot Performance

National Grid DER Pilot Performance

The following appears possible:

- 50% of regional source energy use / household
- 50% of regional source EUI (possible for average size homes)
 - More difficult for smaller homes
 - Slightly more difficult for electrically heated homes
- ~15 kBtu/sf heating and cooling energy use (source energy, climate zone 5)

EEBA – Excellence in Building

U.S. Department of Energy

DSC Building Science Corporation

48

National Grid DER Pilot Performance

Other things we learned:

- Occupant behavior matters (duh)
- System commissioning is important (catch major equipment malfunctions)
- Air tightness matters (but no advantage seen for projects below 1.5 ACH50)
- Slab insulation does not appear to impact heating/cooling energy use (lost amidst other variables)

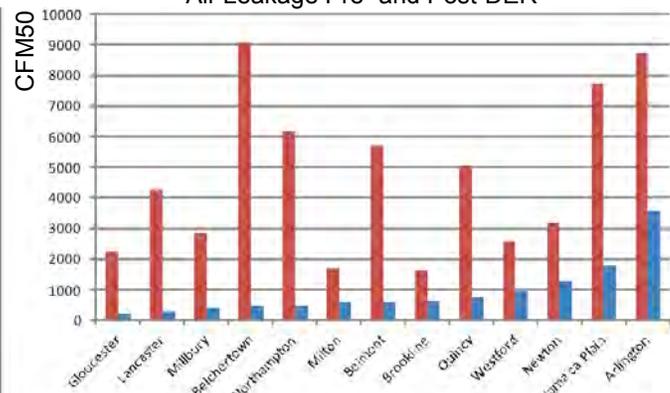

National Grid DER Pilot Performance

How airtight are these DER homes?

- Pre- and post-retrofit measurements
- Reduction
- Achievement (with respect to benchmark)
- What are the impact of various approaches?
- What do outliers tell us?

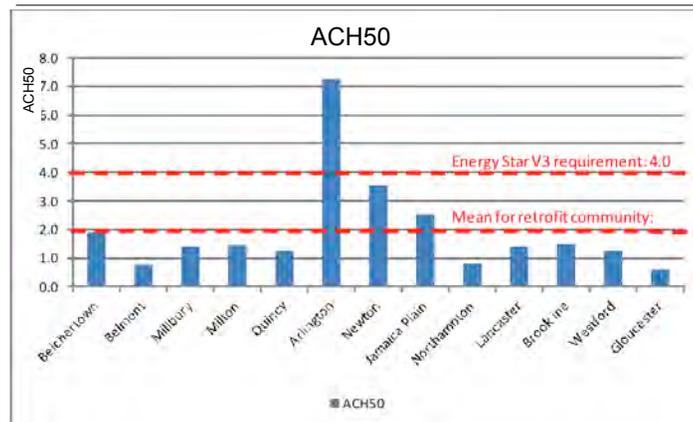

National Grid DER Pilot Performance

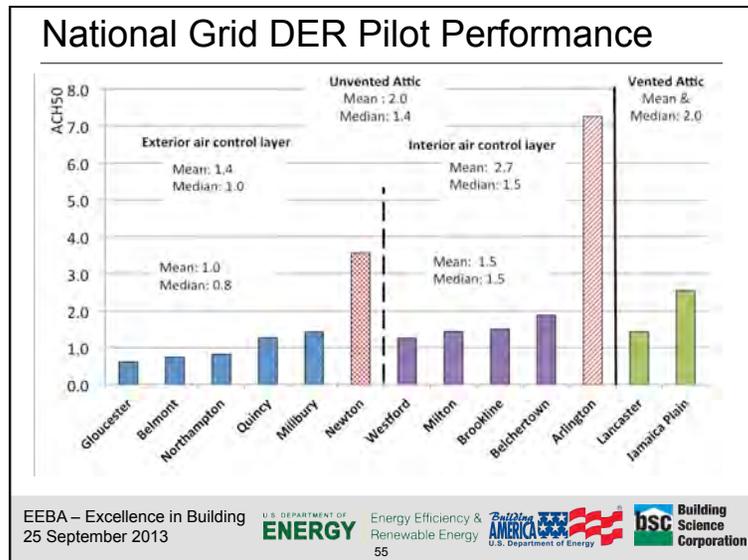

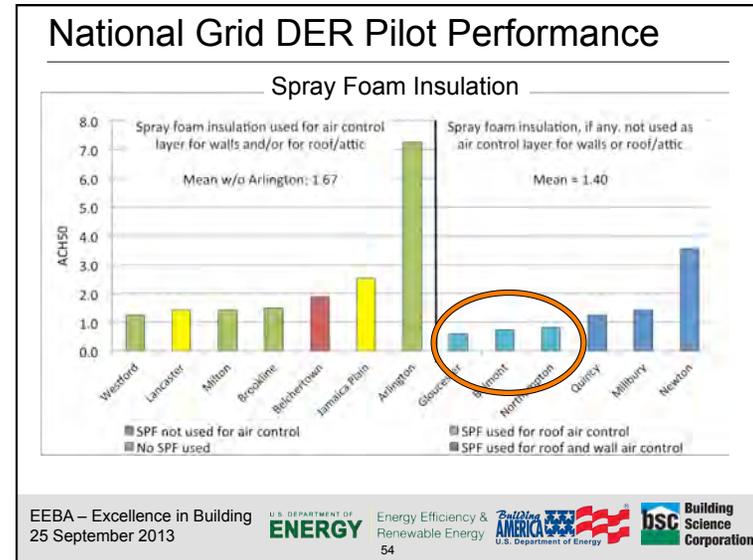

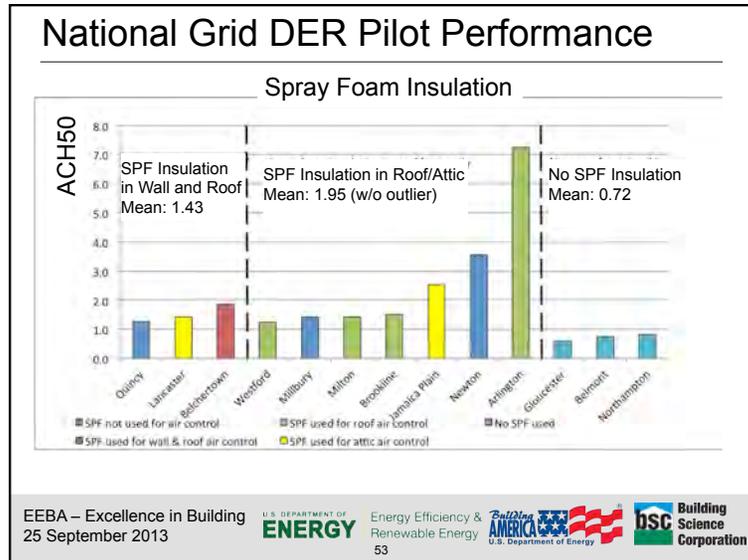

Air Leakage Pre- and Post-DER

National Grid DER Pilot Performance

ACH50

- ### Chainsaw roof: why, why not, how?
- Continuity of air and thermal control
 - Sometimes not accommodated by structure

National Grid DER Pilot – Cost Data

National Grid DER Pilot – Cost Data

National Grid DER Pilot – Cost Data

DER costs, what do we think we know?

- Costs vary widely, it is not cheap
- Comprehensive DER: ~\$50K to ~\$180K
- Comprehensive DER cost/sf conditioned area: average ~\$40/sf, (range ~\$25/sf to \$80+/sf)
- Incremental cost for enclosure retrofit: average ~\$13.50/ssf (range ~\$8.50/ssf to ~\$22/ssf)
- Within the cost variation, there does not appear to be correlation between cost and performance

National Grid DER Pilot – Cost Data

National Grid DER Pilot – Cost Data

National Grid DER Pilot – Cost Data

Should we DER or PV?

- PV might have more source energy reduction
- But! Can your PV do this?
- Create usable conditioned space
 - Improve comfort
 - Make a stinky damp basement dry and fresh
 - Increase building durability
 - Eliminate ice dams
 - Improve appearance of the building...

National Grid DER Pilot Performance

Lessons:

- Make it easy (simplify geometry of the enclosure)
- Give the enclosure an outside chance
- Keep HVAC simple (HVAC, focus on V)
- Basements (and crawlspaces) are *in*
- Spray foam is not a silver bullet
- If it's new and unfamiliar, don't mock it! Mock it up!

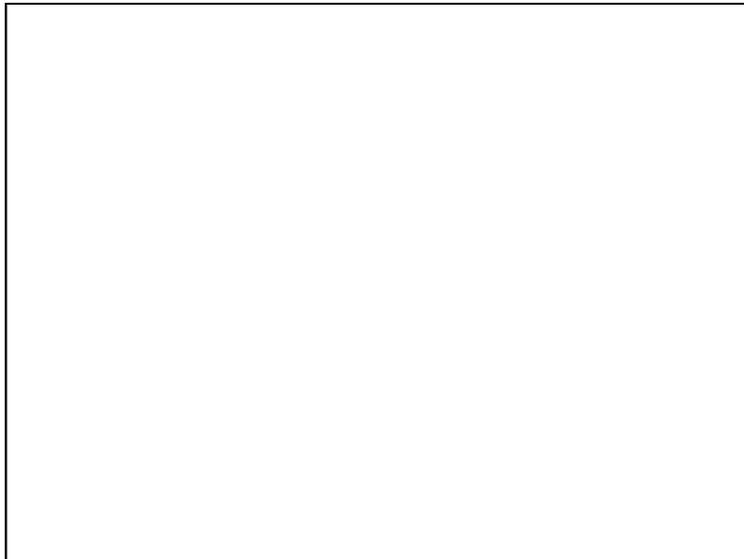

National Grid DER Pilot Performance

How does “all of this” support zero net-energy ready homes?

DER is a path to ZNE ready homes

Future for DER:

- Value-add for regular renovation activity
- Builder/developer not at center of process
- Details and guides
- Broader material options
- Techniques for foundations
